

DERMI NATURAL HEALTHCARE

REPLIT MASTER UPDATE PROMPT

Product image integration + premium smooth UI/UX + logo integration + performance

COPY-PASTE THIS PROMPT INTO REPLIT AFTER/WHILE UPLOADING THE OFFICIAL PRODUCT IMAGES.

CORE GOAL

Use the actual uploaded product images as the authoritative visual source, match every image to the correct product name, and redesign the website so it feels smooth, organic, premium, fast, and custom-built rather than square, rigid, or template-like.

1. PRODUCT CATALOG TO USE

GLETSY

- 1. Gletsy Acne Control Face Wash - 100 ml - Acne/acne-prone skin; Salicylic Acid + Tea Tree Oil.
- 2. Gletsy Skin Lightening & Brightening Cream - 30 g - Brightening; Kojic Acid Dipalmitate + Glutathione + Mulberry.
- 3. Gletsy Oil Free Moisturizer - 70 g - Hydration; oil-free; non-greasy/non-oily feel.
- 4. Gletsy Sunscreen Cream SPF 50 PA+++ - 50 g - SPF 50, PA+++; UVA/UVB protection; supplied product information also references IR and blue-light protection.
- 5. Gletsy Face Wash - Skin Brightening - 100 ml - Skin brightening; Kojic Acid Dipalmitate + Glutathione.

NEUTOGLOW

- 6. NeutoGlow 1000 mg Vitamin C Tablet - 3 x 10 tablets - Vitamin C 1000 mg + Amla Extract.
- 7. NeutoGlow Biotin Tablet - 3 x 10 tablets - Biotin plus vitamins/minerals including B vitamins, C, D, E, Zinc and Iron, as shown in the supplied product information.
- 8. NeutoGlow L-Glutathione Tablet - 3 x 10 tablets - L-Glutathione complex, NAC, Astaxanthin, Grape Seed Extract, Licorice, Vitamins C/E and Zinc.

2. I WILL UPLOAD THE ACTUAL PRODUCT IMAGES

- Inspect every uploaded image carefully.
- Determine which exact product the image represents.
- Match it to the correct product in the catalog above.
- Use the correct product name and the supplied image together everywhere on the site.
- Do not guess, rename products randomly, or attach an image to the wrong product.
- Keep the product packaging and appearance faithful to the uploaded asset.
- Do not recolor, redraw, stretch, distort, or recreate the product.
- Do not mix Gletsy and NeutoGlow products.
- If an image is ambiguous, use visible packaging/text to determine the match; do not invent a match.

3. DO NOT INVENT PRODUCT INFORMATION

- Use only information supplied in this prompt or clearly visible in the official product images.
- Do not invent medical claims, treatment guarantees, clinical results, certifications, awards, reviews, ingredients, dosage instructions, pricing, manufacturing claims, or fake testimonials.

- Where information is unavailable, keep the content simple instead of fabricating it.
- This is a professional healthcare brand website, so factual accuracy is essential.

4. PRODUCT WEBSITE STRUCTURE

- Create a polished product system organized by brand: GLETSY and NEUTOGLOW.
- Each product should have the official product image, exact product name, size/pack, short factual description, relevant supplied ingredient/information content, and a smooth View Product / Explore Product interaction.
- Do not make the Products page feel like a generic grid of square cards.

5. PRODUCT CARDS MUST NOT LOOK SQUARE

- The current website feels too square, rigid, boxed, mechanical, and template-like. Change the design language itself.
- Do not simply add a small border-radius to every card.
- Use soft rounded geometry, organic spacing, elegant image framing, subtle shadows, soft borders, fluid hover effects, rounded image containers, curved visual relationships, and asymmetrical compositions where appropriate.
- Avoid excessive harsh rectangles, thick borders, boxed sections, repetitive card outlines, and sharp corners everywhere.

6. MAKE THE WHOLE WEBSITE VISUALLY SMOOTH

- Audit the entire website, not only Products.
- Buttons should feel smooth, premium, responsive, and refined.
- Use subtle hover effects such as tiny movement, smooth color transitions, slight elevation, and gentle arrow movement.
- Avoid aggressive bouncing, huge scaling, flashing, or laggy hover effects.

7. BORDER TREATMENT

- Use sophisticated borders: subtle radius, soft outlines, low-contrast borders, elegant separators, curved containers, and natural image framing.
- The page should feel soft and refined, not like a collection of UI components pasted together.
- Do not add rounded corners everywhere just for the sake of rounded corners.

8. LOGO INTEGRATION

- The current logo looks too much like a square image placed on the website. Fix this.
- Use the official Dermi Natural logo faithfully: preserve proportions, original colors, and original design.
- Do not redraw it, distort it, stretch it, recreate it as text, or place it in an unnecessary white rectangular frame.
- Use transparent handling where appropriate so the logo feels naturally integrated into the design language.

9. HEADER LOGO

- The header logo must feel clean, minimal, premium, and naturally integrated.
- Avoid the visual treatment of a white box containing a logo.
- The mark should sit naturally in the navigation with appropriate spacing and contrast.

10. WEBSITE LOADING EXPERIENCE

- Create a branded initial loading experience using the official Dermi Natural logo.
- Use a clean cream/ivory background, subtle logo reveal, and a quick smooth transition into the page.
- Do not create a giant spinner or make users wait unnecessarily. The loader exists to make the transition polished, not to advertise that the website is busy.

11. LOGO LOADING ANIMATION

- Use subtle fade-in, slight scale, gentle opacity transition, or a simple reveal.
- Do not spin, bounce, dramatically zoom, or add flashy effects.

12. PERFORMANCE IS VERY IMPORTANT

- The website must be fast.
- The eventual catalog may contain approximately 1,000 products/images, so never load all full-resolution images at once.
- Use lazy loading, responsive image sizes, optimized image delivery, efficient caching, compression where appropriate, visible-item loading, pagination or progressive loading when useful, efficient React rendering, minimal unnecessary JavaScript, and lightweight animations.
- The result must balance beauty and speed.

13. PRODUCT IMAGE PERFORMANCE

- Handle different resolutions, dimensions, backgrounds, file sizes, and aspect ratios intelligently.
- Do not stretch product images.
- Do not crop product packaging incorrectly.
- Use a consistent visual image container while preserving the actual product proportions and appearance.

14. IMAGE UPLOAD ARCHITECTURE

- Make the product-image system scalable for approximately up to 1,000 products/images.
- The system should allow product images to be uploaded, replaced, updated, organized, associated with the correct product, and displayed dynamically.
- The frontend should consume structured product data instead of hardcoding every product card manually.

15. ADMIN PANEL COMPATIBILITY

- Everything that can reasonably be managed from the admin panel should be structured dynamically.
- Support structured fields such as brand, product name, category, size/pack, description, ingredients/key information, image, status, and display order.
- Do not hardcode product information unnecessarily into individual components.
- Make it easy to add many more products later without redesigning the site.

16. PRODUCT DETAIL EXPERIENCE

- Create a polished product-detail experience with a large official image, product name, brand, size/pack, factual overview, key ingredients/information, and carefully organized content.
- Use whitespace and typography to make the product feel premium. Avoid excessive boxes.

17. HERO SECTION

- Keep the existing “Care, made considerate.” headline and supporting copy unless a change is truly needed.
- The Hero must no longer feel like a large square presentation card on the right.
- Redesign the right-side visual so it is organic, fluid, artistic, premium, animated, and visually connected to the brand.
- Integrate the official logo naturally rather than trapping it in a rigid rectangle.

18. VISUAL DESIGN DIRECTION

- Brand feeling: Healthcare + Skincare + Wellness + Nature + Premium.
- Primary colors: deep navy, muted gold, ivory, warm cream, and soft grey.
- Do not introduce purple, neon, or unrelated colors.
- Do not make it look like a generic SaaS startup.

19. ANIMATION STYLE

- Animations should be smooth, subtle, lightweight, and purposeful.
- Use fade, slide, gentle scale, slight translate, soft parallax, image reveals, and refined hover interactions.
- Avoid aggressive motion, bouncing UI, excessive spinning, distracting particles, heavy WebGL, unnecessary 3D, and anything that creates frame drops.
- Prefer CSS transforms/opacity where possible and respect prefers-reduced-motion.

20. SCROLL EXPERIENCE

- Make scrolling feel polished using subtle fade-ins, directional movement, image reveals, and restrained staggered elements.
- Do not animate every line of text independently.

21. NAVIGATION

- Keep Our Story, Products, Contact, and Enquire.
- Improve spacing, typography, hover states, and button behavior.
- The Enquire button should feel premium and smooth, with a small arrow movement on hover.

22. MOBILE EXPERIENCE

- Do not simply shrink the desktop layout.
- Create an intentional mobile composition for header, logo, navigation, hero, buttons, product cards, images, product-detail pages, footer, and loading screen.
- Ensure there is no horizontal scrolling, clipped imagery, oversized text, broken animations, or awkward square layouts.

23. DESIGN CONSISTENCY

- Hero, About, Products, Product Details, Contact, Footer, and admin-connected content should all share the same design language.
- Do not make one page premium while another looks like a default component-library page.

24. DO A FULL VISUAL AUDIT

- After implementation, open the actual rendered website in the browser and inspect it visually.
- Check spacing, alignment, typography, image cropping, border radius, section transitions, animation smoothness, mobile responsiveness, loading experience, logo integration, button behavior, and product/image matching.
- Make another refinement pass based on what is actually visible on screen. Do not assume the first implementation is sufficient.

25. IMPORTANT PRODUCT IMAGE RULE

- Image-to-product-name mapping must be accurate everywhere.
- Example: an image clearly showing Gletsy Sunscreen Cream SPF 50 PA+++ must be assigned to that exact product name, not another Gletsy product.
- Likewise, a NeutoGlow Biotin Tablet image must map to NeutoGlow Biotin Tablet.
- Keep all mappings synchronized across cards, detail pages, search/filter interfaces if present, and admin data.

26. DO NOT ALTER PRODUCT PACKAGING

- Treat uploaded product images as official assets.
- Do not recolor packaging, alter logos, change package text, invent packaging, modify product branding, or generate fake replacement products.
- Only optimize/resize for web display while staying faithful to the source asset.

27. FUTURE PRODUCT SCALABILITY

- The current catalog contains 8 products, but this is only the beginning.
- The architecture should allow future Gletsy products, NeutoGlow products, additional brands, additional categories, and many more product images.
- Aim for growth toward approximately 1,000 product records/images without requiring a redesign.

28. FINAL DESIGN TARGET

- Create a premium custom healthcare and wellness brand website communicating Trust, Care, Quality, Nature, Modernity, and Professionalism.
- Avoid a square, boxed, template-like, generic, static, cheap, laggy, or over-animated appearance.
- The result should be smooth, organic, premium, elegant, responsive, fast, custom-built, beautiful, and easy to navigate.

FINAL INSTRUCTION TO REPLIT

Do not make only small cosmetic changes. Take a proper design pass over the entire website. Prioritize accurate product-image matching, removal of overly square visual language, smooth borders and organic shapes, premium buttons and interactions, a branded loading screen, natural logo integration, fast loading, scalable architecture for approximately 1,000 products, and smooth animations without lag. Use the uploaded real product images as the authoritative source. The final result should feel like a professional premium custom-developed Dermi Natural Healthcare website, not a collection of rectangles pretending to be design.
